What I have to offer

I have held responsible positions in a number of companies specialising in Android App development. My practical experience includes app development, testing, specifications, documentation and people management. A constant learner and accepts changes & challenges and wanted to explore AI in depth.

What I'm looking for?

- Company with a positive ethical stance
- Direct engineering hands-on involvement
- Time and opportunity to learn and apply emerging technologies
- Work hard but not 24/7

Relevant Work History:

Software Engineer

[AGAM Solutions, India](#) (March 19 – Sept 19)

- Responsibilities : Android App Development using Kotlin, Flutter(cross-domain platform), Android SDK (>4.4), app architecture, support multi-screen size (Tablets and TVs), Offline app usage, performance monitor, update meetings, project scope, retrospective details, weekly progress, issue faced and solution in Confluence, work on JIRA tickets, work with API team, DevOps team, and move the app to production, followed AGILE.
- Currently fixing the production bugs.

Tech Lead & Android App Developer

[Bahwan CyberTek, India](#) (Apr 16 – Aug 18)

AWARD: Performer of the year – 2017

- Responsibilities: Develop & maintain the Android app of the product “Droptought”, Initiate daily stand-up call, discuss backlog tickets, assign tickets to colleagues, lead the scrum meeting, questioning on the delayed timelines and report all details in the Confluence.
- Acted as a bridge between the management & the dev team and took bold decision on timelines and resource allocation which resulted in a best way for the product & company.
- Achievements: Upgraded the Android and was responsible for developing a light weight solution.
- Implemented QR/Barcode scanning in the App and followed AGILE.
- Responsible for delivering a quick feedback widget project using JavaScript, jQuery, HTML, CSS, which is still in use. ([click here](#))
- Interact with Business Development team on daily basis to get updates on the product issues, enhancement and feedback from customers

Freelancer: Android App Developer

[TNE Software Solutions, India](#) (Apr 15 – Apr 16)

- Responsibilities: Developed an App for an Australian client “FamilyZone”, Daily stand-up meeting, SCRUM, update technical manual in Confluence, used JIRA to find the assigned tickets, explored and worked on VPN for Android, build the app with KeyStore and upload it to PlayStore.
- Highlights: Developed the app from scratch and pushed the app to the PlayStore,
